

Automated External Defibrillator

AED

Saving Lives...

One Student
at a Time.

In cases of Adult Cardiac Arrest, the odds of survival are linked to the time from “drop to shock.” The AED allows lay rescuers to provide the critical step of defibrillation before the arrival of paramedics. Early defibrillation dramatically increases the survival rate of cardiac arrest.

EMS Safety's AED course prepares participants to recognize cardiac arrest, call for assistance, begin CPR and use the AED. The curriculum is based on the latest AHA/ECC guidelines.

Instructor courses are offered regularly; experienced Instructors may grandfather.

Topics Covered:

Increasing the Odds for Survival

Legal Issues

Scene Safety

Bloodborne Pathogens

Heart Attack & Stroke

ABCD'S

Adult CPR

Child CPR

AED Use

AED Safety

Adult & Child Choking Care

CPR Barrier Devices

Rescuer Stress

28-page, illustrated AED/CPR
student workbook with 2-year
certification card
